

KE Fibertec Mexico secures the order for Arena Ciudad de Mexico

After more than two years of work, KE Fibertec Mexico has secured the order for Arena Ciudad de Mexico or "Mexico City Arena".

KE Fibertec Mexico has worked very closely with the consulting engineer through all stages of the project, providing design assistance etc for the fabric duct system. There will be 10 each 84" diameter fabric ducts 125 / 145 feet long, each duct will distribute 65,000 CFM. The air is distributed by the KE DireJet system utilizing 1" and 2½" nozzles. Installation height is up to 115 feet AFF.

When completed, the \$300 million arena will seat 22,000+ spectators for events of varying character. For more information about the project, please also refer to http://www.arenaciudademexico.com.mx/index_en.html

Please do not hesitate to contact us if you have any questions regarding this project. Contact: Gert Jensen at gsj@kefibertec.com
